Team Introduction

GM Punks!

We are the AzeroPunks Devs; A small, community lead team consisting of five developers, working together for over two years delivering, assisting, and advising multiple projects from Fintech, Metaverse and of course NFTs.

Project Backstory

AzeroPunks started as a nostalgic profile picture NFT project, but evolved over the space of a year into AzeroPunks: The Legend of Scatter City.

We took a different approach to many projects, rebuilding the entire Punks design from scratch and bringing the collection into the present, as opposed to other Punks projects that generally end up as copy-paste derivatives.

By doing this, we were able to give our Punks a fascinating backstory, with fresh and improved characteristics, and even some pets to create our own unique style for the Aleph Zero community.

The Legend of
SCATTER
CITY

The Story So Far:

In a dystopian future marked by technological oppression, a team of Punks band together to defy the empire of Central Inc. The once-thriving Scatter City, now a desolate wasteland, stands as the last bastion of freedom. Hidden beneath the gleaming capital of Central City lies a dark, sinister evil.

This cyberpunk graphic novel delves into themes of identity, defiance, centralisation, and the power of community as the Punks fight for their lives and the future of our world.

Written & Illustrated by @BertThaFarmer

Community Driven

Scatter City's story will unfold over time. Punk holders will have access to a unique community input area once the tools are available where they can share feedback, ideas, and, most importantly, vote on the direction they want the story to go when it reaches tense cliffhangers.

You'll have to wait to learn the outcome, though, because the choice will be kept a mystery by our artist Bert until the next issue drops!

Token Gated

The Legend Of Scatter City will be token-gated. Only Punk holders will be able to connect their wallet to our site and view the graphic novel.

Staking

AzeroPunks holders are rewarded Silver for HODLing! Holders are able to connect their wallet to AzeroPunks.com and begin the rewards process by staking their Punks.

What is Silver?

Silver is an off-chain rewards system built by the Punks team, allowing our community to earn rewards while still keeping the value of our project where it belongs; in our NFTs!

How does it work?

Punks can connect their wallet to AzeroPunks.com and initiate the rewards mechanism by staking their punks. Staking your punks, unlisted, grants 1 Silver per day upon the next log in. Holders must reconnect their wallet once every 7 days and re-stake their punks to continue accumulating Silver.

Silver Rewards

We want both new and old holders to discover the evolving Punks ecosystem, where Silver has the potential to grow alongside it! So, we will be introducing an engaging raffle system to kickstart the excitement after staking is live, to offer rewards to our holders.

What kind of Rewards?

The Silver raffles will offer an enticing array of rewards ranging from exclusive Azero Punk merchandise, one-of-one NFTs and a bunch of other exciting prizes as our project develops.

Launchpad

LaunchPad

Operating primarily on Aleph Zero and also Astar Network in the future our Launchpad will bring a more curated approach to launching NFTs.

Projects wanting to launch utilising our system will have to go through a strict selection process consisting of:

- Art and Metadata checks
- Team reviews
- Whitepaper checks (not-applicable to PFP-only projects)

Projects who meet our high standards will be allowed to launch, also earning the support of the AzeroPunks team.

No launchpad can guarantee the success or safety of a project - Always DYOR!

LaunchPad Fees
